

Marketing Content Automation - 6 Week Roadmap

Week 1

Project setup, define product schema (title, price, discount, CTA, language), choose stack, build basic admin form, integrate AI text generation API abstraction, create design system for templates.

Week 2

Implement copy generation in English/French/Darija (Arabic optional if fonts available), prompt templates, editable outputs, version history, basic moderation.

Week 3

Build image template engine (social square, story, WhatsApp). Dynamic placement of product image, price, logo, CTA. Export PNG.

Week 4

Campaign builder: generate complete package (caption + hashtags + image variants). Queue multiple products. Add brand presets and preview.

Week 5

Automation: publish/export to social folders, approval workflow, analytics hooks, save reusable campaigns, batch generation for catalogs.

Week 6

Polish & demo: user testing, bug fixes, documentation, deployment, metrics dashboard, final presentation with roadmap for future features (video, reels, A/B testing).

Definition of Done

A marketing user can select a product, choose a language (French/Darija/Arabic), generate multiple captions and branded creatives in under 60 seconds, edit them, and export ready-to-post assets.
